

Jordan Avery

Staff Software Engineer

(555) 018-2390 · jordan.avery@example.com · Austin, TX

SUMMARY

Backend and platform engineer with a decade building distributed systems that stay reliable under load. Comfortable owning a service end to end, from on-call rotation to capacity planning, and pairing with product to ship measurable wins.

EXPERIENCE

Staff Software Engineer

Northwind Systems — Platform Reliability

03/2021 – Present Austin, TX

- Led a 12-engineer platform team across three regional sites and two time zones.
- Cut p99 checkout latency from 940ms to 210ms by reworking the caching tier.
- Introduced a widgetized service mesh that removed duplicated routing logic.
- Drove on-call load down 40% with better alert routing and runbook automation.

Senior Software Engineer

Brightwave Labs — Data Infrastructure

06/2017 – 03/2021 Remote

- Built an ingestion pipeline handling 90 million events per day with sub-second lag.
- Migrated three core services to a new storage engine with zero downtime.
- Mentored five engineers, three of whom were promoted within two years.
- Launched the first self-serve analytics surface, adopted by 200+ internal users.

Software Engineer

Coppermill — Web Platform

08/2013 – 06/2017 Denver, CO

- Shipped a redesigned account flow that lifted activation by 18%.
- Added accessibility support across the component library for screen readers.
- Owned the build and release tooling used by the whole web org.

STRENGTHS

Leadership

Grew and steadied teams across sites; coached engineers toward promotion.

Reliability

Data-driven on capacity, latency, and on-call health.

SKILLS

Distributed Systems

Go

Python

Kubernetes

PostgreSQL

Kafka

Caching

Observability

CI/CD

EDUCATION

B.S. Computer Science

State University, 2013
